

Container Platforms Assessment

Assess the health of your container platforms and identify opportunities for improving platform modernization.

Solution Overview

Container platforms are a critical component of modern platform architectures. The industry is rapidly evolving, and container platform tooling options are expanding. AHEAD's Container Platforms Assessment is designed to provide customers with an analysis of their current environment and actionable insights and deliverables to enhance the capabilities of their container platforms.

Why AHEAD for Container Platforms Assessments?

- Expedited time to value
- Actionable insights, recommendations, and backlog
- Flexible but prescriptive in container platform technology stack definitions

AHEAD is committed to providing you with data-driven recommendations and a clear path forward to help you achieve your container platform modernization goals.

Key Outcomes

- Container platform health assessment
- Container platform modernization recommendations
- Container platform roadmap and backlog

Container Platforms Assessment Activities

Identify & define in-scope container platforms

Data collection and analysis of existing container platforms

Analyze data and provide recommendations

Workshop-driven review of containerized application adoption

Present final analysis, recommendations, and decisions

Remediation & Modernization Planning Workshop
